# Supermarket 

B$y$ the numbers, it's good to be in grocery. Traditional grocery remains the channel of choice among shoppers, with nearly all consumers shopping in grocery stores (measured as stores with more than $\$ 2$ million in sales), according to data from Schaumburg, Ill.-based Nielsen Co. Supermarket sales hit $\$ 466.8$ billion in 2012 , up 1.6 percent from 2011 sales of $\$ 459.2$ billion.

Grocery stores, including supermarkets and supercenters, are the No. 1 channel destination for most major categories tracked by Nielsen, even among nonfood items, including detergents and household cleaning supplies. Exceptions include general merchandise such as automotive and appliances, and health and beauty care. But what the numbers don't illustrate is the speed at which other channels are growing their share of grocery dollars. Supercenters account for 20.4 percent of the total share of grocery dollars spent. In center store food alone, supermarkets hold a 54.8 percent share of dollar sales, but supercenters are snagging an 18.7 percent share of the same pie.

Supercenters aren't the only threat; other channels elbowing in include mass merchandisers and club stores, with even drug and convenience stores angling for the consumer grocery dollar. And those are just the brick-and-mortar threats. The competition is literally - maybe we mean virtually - everywhere. Findings from 2013 shopper research from Barrington, Ill.-based retail strategic insight firm Brick Meets Click finds that 11 percent of grocery shoppers are also buying online. This can mean direct-to-home delivery or the option of picking up

Traditional supermarkets
remain consumers'
top grocery destination -
staying on top is the challenge.

## SUPERMARKET CATEGORY SHARE OF SALES

at a store or another fixed location. "Shopmuting" allows consumers to shop for groceries via their mobile devices and have groceries delivered to their homes.

The U.S. grocery business is also in the throes of refocusing on the urban landscape. While "food deserts" - areas that are underserved in terms of fresh food (within 1 mile in a densely populated area and 10 miles in rural areas) - were initial drivers, retailers are aggressively rolling out smallerfootprint formats to meet consumer demand as well as need. And while these new small-format outlets are designed to deliver fresh food along with nonfoods, HBC , etc., the retailers themselves stem from the worlds of drug and mass merchandisers, as well as traditional grocers.

While supermarkets for the past generation have been pushed to "think big," it will be the nimble players that aren't afraid of a little discomfort as they push themselves to find solutions that make sense for their current customer base now, and what the customer base is shifting to be.

Tomorrow's "big ring" actually might be a "small chime," but one that is continual and still sounds sweet.

## Category Tracking

While sluggish growth is the rule for the supermarket channel, a number of categories are performing fairly well, according to Nielsen data.

Alcoholic beverage sales were up 4.6 percent in 2012, an increase from the two previous years. Coolers in particular, while smaller in sales, showed spirited growth of 17.2 percent. Liquor sales were up 10.3 percent, an indication that consumers are still sticking close to home.

Center store food sales were flat at 0.3 percent, with few standout segments. Coffee sales were up 9.1 percent, which doesn't so much mean that consumers are drinking less onpremise coffee, but that they're likely migrating to pricier pod products. Jams, jellies and spreads had sales gains of 11.9 percent, driven to a great degree by natural products in the fruit butter/honey and peanut butter segments.

Nuts, as discussed in greater detail in this report, showed gains of 8.4 percent.

| Tobacco and Accessories | 29,956.15 | 15.4 | 2.2 | 17.6 |
| Wrapping Materials and Bags | 5,490.12 | 35.8 | 21.7 | 57.6 |
| PERISHABLES | \$409,580.19 | 60.2\% | 14.9\% | 75.1\% |
| BAKERY-IN STORE (SERVICE) | \$11,239.52 | 86.6\% | 13.5\% | 100.1\% |

Snacks showed gains of 4.5 percent, attributed to healthier and more single-serve package options in the trail mix, health bar and popcorn subsegments.

Bottled water sales were up 6 percent, driven by the blurred lines between bottled water and soft drinks. "Lowcalorie" still and sparkling waters showed tremendous growth.

The pizza/frozen snack category is down 2.7 percent, a further dip from flat sales in 2011; frozen pizza was the biggest drag on the frozen food category.

Fresh meat growth slowed to 3.2 percent, down from growth of 7 percent in 2011, due to higher costs.

The nascent electronic cigarette category (tracked by IRI; see page 60) is booming and, as this issue went to press, was reported to have hit $\$ 1$ billion in sales, most of which are going to channels other than grocery - a signal that supermarkets need to grab a piece of this action.

## Methodology

Progressive Grocer's 66th annual Consumer Expenditures Study (CES) is based on data collected by The Nielsen Co. for UPC-coded products, as well as sales estimates made by PG's research department for nontracked categories, including perishables and general merchandise.

Data for total retail sales and share of market for supermarkets and mass supercenters is drawn from Nielsen's "Homescan Consumer Facts 2012 Report." The Nielsen Homescan Panel is made up of 125,000 households nationally dispersed and projectable to the total U.S. population. These households record UPC-coded purchases across all outlets.

This year's report spotlights sales trends by total supermarket sales (the orange chart), channel share of sales (the red chart) and percent of buyers per retail channel (the blue chart).

Sales for U.S. supermarkets for 2012, shown in millions of dollars, are based on data from Nielsen's Strategic Planner database of UPC-scanned items, as well as on PG estimates for categories for which Nielsen doesn't collect scan data.

Please note that some totals may not justify, due to rounding or suppression of sales detail. Categories with sales of less than $\$ 10$ million are subject to omission.

Top brand data for the Category Spotlights is provided by IRI, a Chicago-based market research firm. This data encompasses total U.S. supermarket sales.

Other data for fresh food, consumer shopping patterns and general merchandise included in this year's CES comes from Nielsen Perishables Group, Mintel, Euromonitor, Wells Fargo Securities and UBS Investment Research.

An expanded version of PG's 66th annual Consumer Expenditures Study, which includes more in-depth supermarket category sales results, is available for sale at www.progressivegrocer.com.

Debra Chanil, PG's market research director, can be reached at dchanil@stagnitomedia.com.

CATEGORY SPOTLIGHT
BEER
The overall beer category was up 2.4 percent, to almost $\$ 9.16$ billion, for the year ending Dec. 22, 2012, in food stores with more than $\$ 2$ million in sales, according to Nielsen data. Regular beer is flat, up just 1.5 percent, and light beer is losing its fizz with a paltry 0.6 percent lift.

For beer, it's the special categories that continue to be the cure for what "ales" it.

Fueled by the continued success of India pale ales (IPAs), the ale category was up more than 15 percent in 2012 - the third consecutive year of double-digit growth for this subcategory. Popularized by craft brands such as Sierra Nevada, Lagunitas and Redhook, IPAs are
 popular among beer aficionados who appreciate bold, bitter, complex flavors.

Stouts and porters came in a distant second with 4.6 percent growth, thanks to lovers of dark beers and clever marketing by brands like Guinness, which ranks among the top 10 imports, according to IRI. Among other imports, Mexican brands Modelo Especial and Dos Equis came on strong, with sales growth exceeding 22 percent and 16 percent, respectively. Meanwhile, the top 10 domestic brands are dominated by brewing powerhouses Anheuser-Busch (part of global brewer A-B InBev) and MillerCoors, with all but Coors Light and Michelob Ultra Light losing ground last year.

CATEGORY SPOTLIGHT
WINE
Consumers of wine through supermarkets are imbibing at a steady pace, but they're paying more for the privilege. Nielsen data indicates that domestic table wine is the largest segment of the wine category, and sales were up more than 5 percent for the year ending Dec. 22, 2012, down slightly from the two prior years. The next-largest segment is imported table wines, which, while growing, exhibited mostly flat sales. Flavored/refreshment, a small segment of the category, enjoyed the greatest sales gains, 15.5 percent. These wines are often infused with other fruit or floral flavors, such as peach or mango.

At a time when consumers are still feeling financially pinched, wine prices were up about 4 percent for the 52 weeks ending July 14, 2013, as reported by IRI. Brands that held prices relatively steady, including the already popular-priced Barefoot (sales up 12.3 percent), Bogle (sales up 19.5 percent), Black Box Wines (sales up 30.4 percent), and Rex Goliath (sales up 11.2 percent), enjoyed sales gains.
"Consumer demand is requiring a more consumer-friendly, engaging atmosphere, whether at grocery retail or wine stores," says Jayne Portnoy, VP of marketing and brand strategy at Napa Technology, a San Jose, Calif.-based manufacturer of automated intelligence preservation and dispensing systems. The company recently completed research that indicates that, thanks to on-premise wines-by-the-glass programs, consumers are getting more experimental with wine and demanding retailers to help them by providing educated, helpful staff. Retailers are responding by employing in-store experts and hosting tastings, as well as with inventive ways of keeping consumers on premise, notes Portnoy, including fullservice restaurants, tapas bars and wine bars.

## CATEGORY SPOTLIGHT <br> OLIVES

Nielsen reports that the pickle, olive and relish category is down slightly in 2012, from flat sales in 2011. Dill pickles remain the largest player in the category, with nearly 30 percent of category sales; however, sales were flat in 2012.

The flat olive sales reflected in the IRI data are likely the result of increased competition elsewhere in the grocery store the olive bar or deli case. Many grocers now feature a self-serve olive bar that features olives that have been cured in various ways, come from different regions of the world and include myriad seasonings/flavors. Self-serve allows consumers to try small amounts of several varieties at a time, rather than committing to a larger jar or can. Olives' versatility is also coming to light, in that they are great in recipes, spreads and appetizers, or as cocktail accompaniments.

In the packaged aisle, different packaging options are drawing consumer attention. Star Fine Foods has launched Farmer's Market olives packaged in standup pouches, including Olives with Provencal Herbs, Olives Seasoned with Basil, Ripe Olives Medium Pitted, Olives Stuffed with Minced Pimiento, and Manzanilla Olives Pitted. The resealable pouches are a new dimension in a category dominated by cans and jars.

Lindsay has been selling resealable packages of olives since 2011. Black Pearl markets Olives to Go, four 1.2-ounce packs of California ripe olives.

## CATEGORY SPOTLIGHT NUTS

The total U.S. nut market is enjoying healthy growth, according to Nielsen data. Bagged nuts enjoyed sales of nearly 12 percent in 2012, similar to the two prior years. Only unshelled nuts saw a slight decline, of 1.5 percent, an indication that consumers are looking for
 convenience and the additional value of seasoned and mixed varieties.

Snack nuts are the life of the nut party as consumers are turning to nuts as a healthful, satisfying, convenient option.

Big winners in the snack nut category are Kraft's popular Planters, with its NUT-rition brand (sales up 18.5 percent); Paramount Farms' Wonderful (up 20.3 percent), which is expanding beyond pistachios to almonds; and Blue Diamond (up 17.9 percent), which is innovating with fruit-flavored nuts; as well as private label, which saw sales increase 13.9 percent, according to IRI data.

Among the top brands tracked by IRI, only Emerald Snacks took a hit for the year ending July 14, 2013. Emerald parent Diamond Foods, based in Stockton, Calif., posted third-quarter fiscal 2013 losses of 23.2 percent, driven by a 40.3 percent decrease in volume. The company trimmed back SKUs and cut promotional spending for the Emerald brand, which, through its quirky marketing and advertising, created a positive reputation for not taking itself too seriously; the brand was, in fact, more than a little nutty.

Emerald may rebound, however, as Diamond Foods reports that nuts' gross profit was up in the third quarter versus the same period in 2012, due to increased prices, elimination of lower-performing SKUs, and some cost-savings initiatives.

Nuts benefit from - and, in fact, are outpacing sales growth of other snack categories because of - the health halo, as they are natural; a good source of protein, fiber, vitamins, minerals and essential oils; and easy to consume on the go.

## TIME TO MAN UP?

With sales of fresh meat in a holding pattern, it might be time for retailers to redirect their marketing focus, a recent consumer survey suggests.

Within total perishables, meat and produce maintained the largest dollar contributions, followed by deli, bakery and seafood. Although meat had a higher dollar contribution to total perishables than the produce department, produce had slightly higher household penetration and a higher number of trips per household.

The meat department accounted for 39.2 percent of total perishable dollar sales, a decrease of 0.7 percentage points compared with the previous year. Within meat, fresh and processed meat accounted for nearly 90 percent of department sales. Like produce, meat household penetration was nearly 100 percent during the latest 52 weeks.
The seafood department had the smallest contribution to total perishables,
as well as the smallest household penetration and trips per household. Seafood also had the highest decrease in household penetration compared with the previous year, down 1.1 percentage points. Within seafood, fresh seafood accounted for nearly 80 percent of department sales.

But is it time for the meat industry to re-evaluate its target shopper? Researchers at Chicago-based Midan Marketing think so.

Digging into the trend of men taking on more household responsibilities such as grocery shopping and meat preparation, Midan's newest market research study, "Manfluence," looks at whether these men differ from the traditional female shoppers in how they shop for and prepare meat, and what it means for the industry.

Midan defines "Manfluencer" as a meat eater and purchaser who's responsible for at least half of his household's grocery shopping and meat preparation. Of 900 men surveyed online, 47 percent fit this profile.
"The findings of our Manfluence research are quite surprising," says Michael Uetz, principal at Midan Marketing. "Men have changed significantly, and it's time to redefine how we think about them. We see this trend as having a significant impact on our industry."

Perhaps the time is right for the meat industry to broaden its focus beyond the traditional "she" to make room for the up-and-coming, influential "he."

## CATEGORY SPOTLIGHT <br> NOVELTY CHOCOLATE

Chocolate comprises the largest chunk of the candy category, according to Nielsen data, and although it has softened, sales aren't melting. Nielsen tracked supermarket sales of chocolate at $\$ 2.2$ billion in 2012 , up 1.6 percent from 2011. Total candy category sales were $\$ 4.8$ billion in 2012. Big winners in the category include the small (\$41.3 million) non-chocolate miniatures category, with sales up 15 percent in 2012, as well as dietetic non-chocolate, with sales gains of 11.5 percent in 2012 to $\$ 46.4$ million. Hard rolled candies took a hit, dipping 6 percent to just less than $\$ 32$ million.
Novelty chocolates are a small nugget of the nearly $\$ 20$ billion U.S. chocolate candy market (Packaged Facts, 2011), but they're garnering a lot of attention from consumers and retailers alike. Holidays offer up ideas for seasonal formats and varieties, helping retailers create an in-store atmosphere of holiday spirit, one that consumers carry home through the confections they're purchasing.

Novelties also tie in well with pop culture, most notably of the cinematic variety. CandyRific's M\&M's Star Wars Novelty Chocolate Candy continues to sell well, despite the fact that the franchise is several decades old. CandyRific strategically marries
popular confectionery brands, inold. CandyRific strategically marri
popular confectionery brands, including M\&M's, Peeps, AirHeads
and Skittles, to entertaincluding M\&M's, Peeps, Air
and Skittles, to entertainment franchises such as Disney, Transformers, Nickelodeon and Scooby-Doo.

CATEGORY SPOTLIGHT RTE CEREAL

If breakfast is the most important meal of the day, cereal must be losing out to other options. Supermarket sales of the total cereal category were down 2 percent during 2012, and were flat to declining in the
 two years previous, according to Nielsen. The granola segment was the ray of sunshine, with sales up 8 percent, consistent with growth over the previous two years. Granola is a small segment of the category, with $\$ 246.7$ million in supermarket sales, compared with the total cereal category's sales of $\$ 6.6$ billion, but consumers are drawn to the "natural" halo of the segment.

Ready-to-eat (RTE) cereal declines, nearly 3 percent according to Nielsen, come at a time when restaurants are upping their breakfast game and consumers are finding it's as easy to pick up breakfast as it has been to pick up a hot cup of coffee; offerings are ubiquitous. Further, oatmeal, the stalwart of the hot cereal subcategory, is gaining in availability and popularity as an away-from-home breakfast solution; cup oatmeal is easy to carry from car to desk.

Among top RTE brands, Kellogg's Special K is a proteinpacked standout, with sales up nearly 25 percent for the 52 weeks ending July 14,2013 , as tracked by IRI. Special K has been busy not only with product development, but also with connecting to its core consumers: women. The brand's "The Gains Project" campaign touts research commissioned by Special K and produced by Edelman Berland, which finds that "women who think positively are more likely to report success with weight management efforts."

REFRIGERATED JUICE
AND DRINK SMOOTHIES
Refrigerated juices, as tallied by Nielsen, were flat in 2012, on supermarket sales of $\$ 3.9$ billion. Stalwart orange juice saw supermarket sales squeezed just more than 3 percent, due not just to price increases, but also competition from other products, most notably juice blends that include vegetables. Consumers remain price sensitive, but they're also looking for value beyond price, and that translates to further fortification, most notably with vitamins.

Ready-to-drink (RTD) smoothies are a standout segment in this category, as by their nature they offer a healthy and satisfying experience for the consumer. As a marketing angle, smoothies are proclaiming "what's in it for the consumer," including fiber, protein and other nutrients. Bolthouse, for example, proclaims right on the front label that its Strawberry Banana Smoothie contains 19 strawberries and one banana; with other ingredients, the smoothie contains 3.75 servings of fruit.

Silk experienced sales growth of 106.7 percent for the year based on the launch of its soymilk-based juice drinks, according to IRI data for the 52 weeks ending July 14, 2013. Varieties include Mixed Berry, Strawberry Banana and Mango Peach. It should be noted, however, that Silk isn't marketing these products as smoothies, but as juice drinks. The soymilk is likely the source of confusion here, because as many smoothies are dairy-based, it would be natural to think a dairy-alternativebased drink should be categorized as a smoothie.

Odwalla Superfood has enjoyed growth of 48.1 percent, according to IRI, likely due to new product activity in 2012. The Coca-Cola brand launched USDA Certified Organic Garden Organics fruit and vegetable smoothies (Carrot, Carrot Apple Berry, Carrot Apple Mango and Carrot Beet Ginger) as well as Smoothies for Kids (Grape Berry Prairie, Mango Pineapple Island and Strawberry Banana Jungle).

## CATEGORY SPOTLIGHT

## ACNE TREATMENTS

Supermarket sales of skin care products have been dull for the past several years, finishing 2012 at $\$ 893.6$ million according to Nielsen. The tiny ( $\$ 2$ million) skin-toning and -bleaching segment, with 2012 growth of more than 28 percent, is the true standout in the category.

Top 10 Acne Treatment Brands

| Brand | Dollar Sales <br> (in Millions) | Percent <br> Change | Unit Volume <br> (in Millions) | Percent <br> Change |
| :--- | ---: | ---: | ---: | ---: |
| Total | $\mathbf{\$ 1 0 6 . 0}$ | $\mathbf{- 1 . 1 \%}$ | $\mathbf{1 8 . 5}$ | $\mathbf{- 0 . 2 \%}$ |
| Neutrogena Oil Free Acne Wash | 13.9 | 4.5 | 2.0 | 2.8 |
| Clearasil Ultra Rapid Action | 7.3 | 24.9 | 1.0 | 27.3 |
| Clearasil Daily Clear | 6.8 | 11.2 | 1.4 | 12.7 |
| Oxy | 4.8 | -19.0 | 1.1 | -21.5 |
| St. Ives Naturally Clear | 4.5 | -22.9 | 1.2 | -22.6 |
| Aveeno Clearn Complexion | 4.4 | 3.1 | 0.5 | 1.9 |
| Neutrogena | 3.9 | 44.6 | 1.0 | 23.6 |
| Private Label | 3.8 | 12.5 | 1.1 | 15.9 |
| Neutrogena Acne Stress Control | 3.7 | -2.5 | 0.5 | -2.0 |
| Neutrogena Rapid Clear | 3.3 | -6.6 | 0.4 | -6.3 |

Included in this segment are products intended to fade or eliminate spots due to sun damage and aging, providing consumers with more uniform complexions.
Sunscreens and sunblocks have shown respectable growth of 5.7 percent, to \$175 million.

Flat to sluggish sales in the acne treatment segment belie tremendous amounts of activity. Big winners, according to IRI data for the 52 weeks ending July 14, 2013, include Neutrogena acne treatments, which enjoyed supermarket sales gains of 44.6 percent.
Neutrogena Oil Free Acne Wash, the category leader with $\$ 13.9$ million in sales, had gains of 4.5 percent for the year covered by IRI. Sister products Neutrogena Acne Stress Control and Rapid Clear didn't fare as well.

Clearasil Ultra Rapid Action enjoyed sales gains of 24.9 percent. Private label acne treatment sales were up 12.5 percent.

Acne products are tasked with more than clearing away unwanted spots. In acne parlance, exfoliation is used to scrub away dirt and dead skin, but it's also now used to promote smooth skin. Products also work to promote even skin tone and reduce the appearance of acne marks. Foremost to the category, however, is that usage of products will prevent acne from occurring, or at least attack it at the first sign.

CATEGORY SPOTLIGHT COFFEE

Coffee's a $\$ 10.4$ billion category in the grocery channel, up almost \$1 billion since last year, and traditional supermarkets are holding firm to their share of the market at just a little more than 43 percent of sales, down a mere 0.1 percent, according to Nielsen data.

In 2012, coffee consumption jumped 7 percent from 2011
 figures, giving the beverage a 10-point advantage over soft drinks, according to data from the New York-based National Coffee Association's (NCA) National Coffee Drinking Trends 2012 survey.

A key driver has been the continued growth of single-serve K-cup technology, adopted by a growing number of brands. Starbucks K-Cup Packs ranked second of the top 10 food and beverage brands among IRI's 2012 New Product Pacesetters, with $\$ 198.9$ million in first-year sales. More than 850 million Starbucks K-Cup packs shipped to food retailers and other outlets since launching in November 2011.

IRI reports that the single-cup subcategory generated nearly $\$ 860$ million in sales for the year ending July 14, 2013, up more than 60 percent over the prior year. In fact, the overall premium single cup (PSC) category now accounts for more than 25 percent of total coffee sales in grocery, and was the only coffee subcategory to report sales growth.

Traditional coffee categories are sagging. For example, while overall coffee sales were up 4.4 percent for IRI's reporting period, sales of ground coffee were down nearly as much. Of the top 10 ground-coffee brands, only two experienced sales growth: private label, at 2.25 percent, and grocery newcomer Gevalia, which at seventh place delivered a sales increase of nearly 191 percent.

Another driver has been sustainability, as organizations dedicated to the environment collaborate with coffee roasters and retailers to deliver coffee grown in an eco-friendly fashion.

CATEGORY SPOTLIGHT
FROZEN PIZZA
Growth in the frozen pizza category seems to mirror that of the overall frozen category, which is showing signs of sputtering back to life after a year in the deep freeze.

Overall, total sales in
 the frozen pizza, snack and hors d'oeuvre category were about $\$ 5.8$ billion, according to data from Nielsen Co., essentially flat from the numbers a year ago, on total frozen category sales just shy of \$48 billion. But the share of those sales for traditional supermarkets has slipped a bit, to about 62 percent compared with 63.5 percent at this time last year.

Only three of the top 10 frozen pizza brands showed positive sales growth for the year ending July 14, 2013, according to IRI data, with Nestle's DiGiorno brand and private label each falling about 5 percent.

But while deli pizza sales are still on the rise as sales of frozen pizza continue to decline, Nielsen Perishables Group insists there's no reason they cannot successfully co-exist.

Nielsen notes that deli pizza sales index high across all household sizes, while frozen pizza sales index high almost exclusively across families with children in the home. Most pizza buyers have a discernible preference for deli or frozen pizza, as only 18 percent of pizza buyers purchase both deli pizza and frozen pizza in a given year, Nielsen reports.

Meanwhile, Packaged Facts reports that new products, rather than increased consumer demand, have been contributing to the most recent dollar sales gains in the frozen food category. New frozen pizza entries have included "free-from" and healthier selections like Supreme French Bread Pizza from Framingham, Mass.-based Ian's Natural Foods and sprouted-grain crust pizzas from Delray Beach, Fla.-based Better For You Foods, as well as twists on old standbys, like Red Baron Mexican Style Pizza from Bloomington, Minn.based Schwan's Consumer Brands.

## CATEGORY SPOTLIGHT

## ELECTRONIC CIGARETTES

Electronic cigarettes are on fire, and grocery retailers would be wise to expand their involvement in the category.

According to IRI, a mere $\$ 3.5$ million in
 e-cigarette sales could be credited to food stores during the year ending Nov. 4, 2012.

The e-cigarette market hit $\$ 250$ million in 2011, doubled in 2012 and, according to Wells Fargo Securities data released by e-cig brand V2 shortly before press time, has topped $\$ 1$ billion in combined brick-and-mortar and online sales.

Who's buying e-cigarettes? Consider these statistics, according to UBS:
> 99 percent of e-cigarette users are either
current or past users of multiple forms of tobacco.
> 62 percent have stopped smoking cigarettes or smoke fewer cigarettes since starting e-cigarettes.
$>79$ percent of initial purchasers continue to buy them.
In fact, consumption of e-cigarettes will likely outpace traditional cigarettes over the next decade, "especially given the rapid pace of innovation and consumers' demand for reduced-harm products," Wells Fargo predicts. Certainly, this is why tobacco giants like Altria and Lorillard are getting in on the game themselves.

E-cigs are attractive to retailers for their "fat margins and low-maintenance selling," Wells Fargo reports. The c-store channel is already realizing the benefits, leaving grocers to play "follow the leader" thus far.

Category leaders to date, according to Euromonitor, include Njoy, which reports placement in more than 10,000 retail locations nationwide, mostly gas/c-stores; Crown 7; V2; and Blu. Njoy was further noted in a pilot study, to be published in the American Journal of Health Behavior, that showed the product delivered nicotine at a rate comparable to some FDA-approved nicotine replacement therapy products and led to short-term smoking reduction.

The key to the future of e-cigarettes, Euromonitor reports, appears to be in how they'll be treated by the U.S. Food and Drug Administration (FDA). In 2011, the FDA revealed plans to regulate e-cigs, noting the presence of carcinogens and toxic chemicals in some products.

E-cigarette Sales \& Volume Across Retail Channels

| Brand | Dollar Sales <br> (in Millions) | Percent <br> Change | Unit Volume <br> (in Millions) | Percent <br> Change |
| :--- | ---: | :---: | ---: | ---: |
| Total | $\mathbf{\$ 2 4 3 . 2}$ | $\mathbf{1 7 3 . 6} \%$ | $\mathbf{1 9 . 6}$ | $\mathbf{2 4 7 . 3 \%}$ |
| Food | 3.5 | 447.8 | .288 | 384.2 |
